

IN THE CLAIMS:

Please amend Claims 1, 3, 5, 7 and 8, and add new Claims 12 to 23 as shown below. Please cancel Claims 6, 9, 10 and 11 without prejudice or disclaimer of subject matter. The claims, as currently pending in the application, read as follows:

1. (Currently Amended) A management device comprising:
wireless communication means for wireless communication with a communication control device;
memory means for storing identification data for identifying said ~~communication control~~ management device;
reception means for receiving data from a management center connected through a communication network; and
registration means for registering, in said memory means, the identification data received by said reception means, for identifying said ~~communication control~~ management device.

2. (Original) A management device according to claim 1, wherein said wireless communication means executes communication for managing, by said management center, a peripheral device connected to said communication control device.

3. (Currently Amended) A management device according to claim 1, wherein said registration means registers, in said memory means, identification data

received by said reception means for identifying said ~~management~~ communication control device.

4. (Original) A management device according to claim 1, wherein said wireless communication means functions as a base wireless station for said communication control device functioning as a mobile wireless station.

5. (Currently Amended) A management device according to claim ~~[[1]]~~ 3, wherein said registration means registers, in said memory means, identification data for identifying plural communication control devices ~~connected~~ received by said reception means.

6. (Cancelled).

7. (Currently Amended) A management device comprising:
wireless communication means for wireless communication with ~~plural a~~
communication control ~~devices~~ device;
memory means for storing identification data for identifying said ~~plural~~
~~communication control devices~~ management device;
connection means for connecting a management center through a
communication network; and

registration means for registering, in said memory means, identification data received by said wireless communication means from ~~one of said plural~~ communication control device, for identifying said ~~plural communication control devices~~ management device.

8. (Currently Amended) A management device according to claim 7, wherein said registration means registers identification data received by interslave communication by said wireless communication means, from ~~one of said plural~~ communication control ~~devices~~ device, for identifying said ~~plural~~ communication control ~~devices~~ device.

9. to 11. (Cancelled).

12. (New) A management device according to claim 1, wherein said registration means comprises request means for requesting the identification data from the management center, and input means for inputting a password for requesting the identification data.

13. (New) A management device according to claim 7, wherein said registration means registers, in said memory means, identification data received by said wireless communication means from said communication control device, for identifying said communication control device.

14. (New) A management device according to claim 7, wherein said wireless communication means executes communication for managing, by said management center, a peripheral device connected to said communication control device.

15. (New) A management device according to claim 7, wherein said registration means comprises request means for requesting the identification data of said communication control device, and input means for inputting a password for requesting the identification data.

16. (New) A method for registering identification data, the method being performed by a management device that performs wireless communication with a communication control device, the method comprising steps of:

receiving data from a management center connected through a communication network; and

registering, in a memory, identification data received in said reception step, for identifying the management device.

17. (New) A method according to claim 16, wherein said registering step registers, in the memory, identification data received in said reception step for identifying the communication control device.

18. (New) A method according to claim 16, wherein said registration step comprises a step of requesting the management center the identification data, and a step of inputting a password for requesting the identification data.

19. (New) A method according to claim 17, wherein said registering step registers, in the memory, identification data for identifying plural communication control devices received in said reception step.

20. (New) A method for registering identification data, the method being performed by a management device that is connected to a management center through a communication network and that performs wireless communication with plural communication control devices, the method comprising steps of:

receiving data from the plural communication control devices via wireless communication; and

registering, in a memory, identification data received from one of said plural communication control devices via the wireless communication, for identifying said management device.

21. (New) A method according to claim 20, wherein said registration step registers identification data received by interslave communication via by the wireless communication, from one of said plural communication control devices, for identifying said plural communication control devices.

22. (New) A method according to claim 20, wherein said registration step registers, in the memory, identification data received from one of said plural communication control device via the wireless communication, for identifying said plural communication control devices.

23. (New) A method according to claim 20, wherein said registration means comprises request means for requesting the identification data of said one of said plural communication control device, and input means for inputting a password for requesting the identification data.
